Woodland and Willow Nest

Wildlife Stations

MAKE IT

Feeding and nesting stations for wildlife

Description

In addition to the varied and diverse habitats created in the garden for plants, there are numerous opportunities for fauna. These can be enhanced by the inclusion of service stations throughout the design and might include:

- bat boxes
- bird boxes (various birds)
- feeding tables and hangers
- hedgehog nests
- slowworm nests
- lacewing nests
- butterfly feeding stations etc.

Function

To add diversity to the habitats and maximise opportunities for fauna throughout the garden.

MAKE IT

Contributing schools

Costessey High School, Norfolk

We created a bug hotel, using silver birch logs, a bark-covered flower pot to act as a small mammal home, sections of plastic down-pipe filled with cut canes as bee homes, and a number of various-sized logs and flints all built on a base-board with willow framework, up which ivies could be grown to back the structure.
